

OZ 2.0 Candidate Tracts — WFRC Analysis

WFRC & MAG Region · Wasatch Front, Utah · Generated June 05, 2026

ABOUT THIS WORKBOOK

This workbook presents the WFRC/MAG Opportunity Zone 2.0 candidate tract analysis for the nine-county Wasatch Front region. It covers every census tract on the federal OZ 2.0 eligible list, with metrics spanning land use, transit access, housing inventory, projected growth, and Access to Opportunities indicators. The Summary sheet provides a regional overview of all eligible tracts. Per-county sheets offer a detailed profile for each tract, including an embedded map and key metrics organized by theme. The All Data sheet contains the complete set of metrics in a flat, filterable table for cross-tract comparison and analysis.

SHEETS IN THIS WORKBOOK

Sheet Name	Description
README	This sheet: about this workbook, abbreviation glossary, and data sources.
Summary - 4 Key Measures	Regional overview: one row per tract with key profile and access metrics for all eligible tracts across the Wasatch Front.
Box Elder County - Detailed	Box Elder County: per-tract detail blocks with embedded map and metrics organized by theme.
Weber County - Detailed	Weber County: per-tract detail blocks with embedded map and metrics organized by theme.
Davis County - Detailed	Davis County: per-tract detail blocks with embedded map and metrics organized by theme.
Salt Lake County - Detailed	Salt Lake County: per-tract detail blocks with embedded map and metrics organized by theme.
Tooele County - Detailed	Tooele County: per-tract detail blocks with embedded map and metrics organized by theme.
Utah County - Detailed	Utah County: per-tract detail blocks with embedded map and metrics organized by theme.
All Data - Detailed	Complete dataset: all metrics for every tract in one filterable table. Use this sheet for cross-tract comparison and custom analysis.

ABBREVIATIONS & GLOSSARY

Term	Full Name	Description
ATO	Access to Opportunities	Composite 0-100 index combining driving and transit access to jobs and households.
DEVACRES	Developable Acres	Developable land within a TAZ from the ATO layer; used as intersection weight for ATO scores.
ERU	Equivalent Residential Unit	Growth density metric: 1 household = 1 ERU, 1 job = 0.4 ERU. ERU puts gains in job density on an equal footing with gains in residential housing unit density for 11-digit FIPS code: 2-digit state + 3-digit county + 6-digit tract.
GEOID	Census Tract Geographic ID	
MF	Multi-family housing	Apartments, condos, etc.
OZ 1.0	Opportunity Zones (2018 round)	Prior federal OZ designations; overlap shown for context.
OZ 2.0	Opportunity Zones 2.0 (current)	Current federal eligible tract list under evaluation.
SAP	Station Area Plan	Adopted housing plan within 1/2-mile of a rail or BRT stop.

SFA	Single Family Attached	Single family home with some form of shared wall or floor (i.e. includes duplexes, townhomes, and other 'missing middle' style homes).
SFD	Single Family Detached	Traditional single family home, with no walls shared with other housing units (i.e. excludes duplexes, townhomes, and other 'missing middle' style homes).
TAZ	Traffic Analysis Zone	WFRC/MAG forecast unit; growth projections are area-proportioned from TAZ to tract.
WC / MUorC	Wasatch Choice / Metro-Urban-City Center	WFRC/MAG regional growth center framework. MUorC = Metropolitan, Urban, or City center types.

METHODOLOGY NOTES

Metric	How It Is Calculated
ATO Composite Score	Each of the four raw ATO subscores — Jobs (Auto), Households (Auto), Jobs (Transit), Households (Transit) — is rescaled 0–100 using min-max normalization across all MPO-region tracts in this export. The four normalized values are then averaged to produce a single 0–100 composite index (higher = greater access). Scores are relative to the tracts included in this export: adding or removing tracts would shift individual values.
ATO % of County Avg	Tract ATO Composite Score ÷ average ATO Composite Score for all tracts in the same county × 100. The county average is computed via AVERAGEIF in the All Data sheet and excludes non-MPO tracts (Tooele County), which have no ATO data. A value of 100 means the tract matches its county average; values above 100 indicate above-average access for that county.
ERU Added / ERU per Acre	ERU (Equivalent Residential Unit) standardizes growth across land use types. ERU Added = Households Added + (Jobs Added × 0.4). ERU per Acre = ERU Added ÷ Developable Acres. The 0.4 weight reflects that employment uses are less land-intensive than housing. Growth figures are sourced from WFRC/MAG TAZ projections (2027–2037), area-proportioned to census tract boundaries using developable acres as the weight.
Cities	Determined by spatial intersection of the census tract boundary with U.S. Census TIGER/Line Place boundaries (incorporated cities, towns, and census-designated places). Municipalities covering less than 2% of the tract area are excluded to avoid listing artifacts from boundary slivers. Where multiple cities qualify, they are listed in descending order of intersection area.
SAP & ATO Availability	Station Area Plan (SAP) and Access to Opportunities (ATO) metrics are derived from WFRC/MAG datasets that cover only the MPO planning boundary. Tooele County tracts fall outside this boundary and therefore have no SAP or ATO data. These cells show 'n/a' in the per-county detail sheets and are left blank in the All Data sheet. *Some SAP are showing '0', even though they have stations. This is because they were completed before the state law was enacted, and therefore, no
